

CloudSync Pro — Customer Help Guide

Version 3.2 | Last Updated March 2026

Getting Started

CloudSync Pro is a cloud storage and file synchronization platform designed for teams of all sizes. When you first sign up, you get 15GB of free storage. Your files sync automatically across all your devices within seconds of making changes. The desktop app is available for Windows, Mac, and Linux. Mobile apps are available for iOS and Android on their respective app stores.

To set up your first workspace, log in at app.cloudsyncpro.com and click 'Create Workspace'. Name your workspace, invite team members by email, and choose your storage plan. Each workspace operates independently with its own billing, members, and storage quota.

Account & Billing

Pricing Plans

We offer four plans: Free (15GB, 3 members), Starter (\$9/user/month, 100GB, unlimited members), Professional (\$19/user/month, 1TB, advanced permissions, version history), and Enterprise (custom pricing, unlimited storage, SSO, audit logs, dedicated support). All paid plans include a 14-day free trial. Annual billing gives you 2 months free.

Payment Methods

We accept Visa, Mastercard, American Express, and PayPal for monthly payments. Enterprise customers can pay via bank transfer or purchase order. All transactions are processed through Stripe with PCI-DSS Level 1 compliance. Invoices are generated automatically on the 1st of each month.

Cancellation & Refunds

You can cancel your subscription at any time from Settings > Billing > Cancel Plan. Your access continues until the end of the current billing cycle. We offer full refunds within 30 days of any charge. After 30 days, annual plan customers receive a prorated refund for unused months. Monthly plan charges are non-refundable after 30 days. When you cancel, your files remain accessible for 90 days before permanent deletion.

File Management

Uploading Files

You can upload files by dragging and dropping into the web app, using the desktop sync folder, or through our mobile apps. Maximum file size is 5GB on Free and Starter plans, and 25GB on Professional and Enterprise plans. We support all file types. Bulk uploads of up to 1,000 files at once are supported through the desktop app.

Sharing & Permissions

Share files or folders by right-clicking and selecting 'Share'. You can share via email invitation or generate a public link. Permission levels include Viewer (can only view and download), Editor (can edit and upload), and Admin (full control including delete and share management). Public links can be password-protected and set to expire after a specific date. Link access can be revoked at any time.

Version History

CloudSync Pro keeps version history for all files. Free plans retain 30 days of history, Starter keeps 90 days, Professional keeps 1 year, and Enterprise keeps unlimited history. To restore a previous version, right-click the file, select 'Version History', and click 'Restore' next to the version you want. The current version is saved before restoration.

Security & Privacy

All files are encrypted with AES-256 at rest and TLS 1.3 during transfer. We operate zero-knowledge encryption on Enterprise plans, meaning even our staff cannot access your files. Data is stored in SOC 2 Type II certified data centers in the US and EU. You can choose your data region during workspace setup. We undergo annual third-party security audits and publish the results.

Two-factor authentication (2FA) is available for all accounts and required on Enterprise plans. We support authenticator apps (Google Authenticator, Authy) and hardware security keys (YubiKey). Enterprise customers also get SAML-based Single Sign-On (SSO) integration with Okta, Azure AD, and Google Workspace.

Integrations

CloudSync Pro integrates with popular tools including Slack (get notifications for file changes), Microsoft Teams (share and preview files in channels), Google Workspace (import/export with Drive), Notion (embed synced files), Zapier (automate workflows with 5,000+ apps), and

GitHub (auto-backup repositories). API access is available on Professional and Enterprise plans with full REST API documentation at docs.cloudsyncpro.com/api.

Troubleshooting

Files Not Syncing

If files are not syncing, first check your internet connection. Then verify the desktop app is running (look for the CloudSync icon in your system tray). Try restarting the app. If the issue persists, check if you have reached your storage quota in Settings > Storage. Large files over 1GB may take several minutes to sync depending on your connection speed.

Login Issues

If you cannot log in, first try resetting your password via the 'Forgot Password' link on the login page. The reset email is sent within 2 minutes. Check your spam folder. If you have 2FA enabled and lost your device, use one of your backup recovery codes. If all else fails, contact support with your account email for manual verification.

Storage Full

When your storage is full, you cannot upload new files but existing files remain accessible. To free space, delete unnecessary files and empty the trash (Trash > Empty Trash). Files in trash still count toward your quota. Alternatively, upgrade your plan for more storage. You can view a breakdown of storage usage in Settings > Storage > Usage Details.

Contact Support

Our support team is available Monday through Friday, 9 AM to 9 PM EST. You can reach us through the in-app chat widget, by email at help@cloudsyncpro.com, or by scheduling a video call at cloudsyncpro.com/support. Enterprise customers have access to 24/7 priority support with a dedicated account manager. Average response time is under 1 hour for Enterprise and under 4 hours for all other plans.
