

INTEGRATIONS

Connect SupportBot Studio to your entire business stack

Every conversation event — lead captured, escalation triggered, chat ended — fires a secure webhook your tools can act on. No custom code required on your end.

HOW IT WORKS

- 1 Visitor chats on your website via SupportBot
- 2 AI detects a lead, escalation, or conversation end
- 3 SupportBot fires a signed webhook to your URL instantly
- 4 Your tools (n8n, Zapier, Make, custom) handle the rest

EVENT TYPES

lead_captured	Visitor expresses buying intent. Log to CRM or notify your sales team.
escalation_triggered	Bot hands off to a human. Alert via Slack, Telegram, or email.
conversation_ended	Chat closes. Archive to Notion, Sheets, or your helpdesk.

WORKS WITH YOUR EXISTING TOOLS

n8n • Zapier • Make • Activepieces • Slack • Gmail • Google Sheets • Notion • Telegram • Pipedream • Custom API • + anything with a URL

SAMPLE PAYLOAD

```
{
  "event_type": "lead_captured",
  "bot_id": "abc123",
  "timestamp": "2026-05-07T10:00:00Z",
  "data": {
    "visitor_id": "v_xyz",
    "bot_name": "Acme Support",
    "message": "I'm interested in your enterprise plan"
  }
}
```

SECURITY BUILT IN

- ✓ HMAC-SHA256 signature on every request
- ✓ X-SupportBot-Signature header for verification
- ✓ Per-tenant webhook secrets
- ✓ SSRF-guarded custom HTTPS endpoints
- ✓ Async retry on delivery failure
- ✓ Event subscription filtering

SupportBot Studio — Setup once. Integrate with everything.
